## Ben 2 and Ben 3 - Fuelwood Stoves

Welded Tripod Legs (4W)

The welded tripod consists of three equal parts (4W) which are welded together.

The parts (4W) are made of mild steel with a diameter of 6 mm . This material can be cold bended by hand with a simple bending device described on the next pages. Bending steps are illustrated on pages 6 ... 8.

Ben2 and Ben 3 - Fuelwood Stoves
Device (D4W) for Welded Tripod: Drawings of Parts (D4Wa) ... (D4Wc)

Drawings of base board (D4Wa) cover plate (D4Wb) and clamping piece (D4Wc)

Centers of the holes are marked with center punch at the bended cover plate, than the holes of base board an cover plate are drilled jointly.

The assembly drawing of (D4W) is on the next page

Device (D4W) for bending of tripod leg:
Base board and cover plate of (D4W) are attached to the foldable work bench (X).
The bending steps are described with the photo gallery (pages 6 ... 8).

## List of Parts: Bending Device (D4W) for Welded Tripod (4W)

With the proposed welded tripod the tripod ring (4a) and tripod legs (4b) together with the devices (D4), (D5) and (D6) are replaced.

## Ben 2 and Ben 3 - Fuelwood Stoves

Photos from Bending the Tripod Legs for the Welded Tripod (4W)

Fix the round steel ( 617 mm length, 6 mm diameter) at the bending device with the clamping piece and the wing nut. Align left end of the rod with the left side of the plate.

First bend with the help of the tube as lever

3

Prepare the second bend, fixing the rod with its left end aligned with the center of the hole.

4

Second bend with the help of the tube as lever

## Ben 2 and Ben 3 - Fuelwood Stoves

Photos from Bending the Tripod Legs for the Welded Tripod (4W)

Prepare the third bend, positioning the bended rod at the bolt head and fixing with the wing nut.

Third bend with the help of the tube as lever

Prepare the forth bend, positioning the workpiece with its left part at the right bolt head and fixing with the wing nut.

Forth bend with the help of the tube as lever

## Ben 2 and Ben 3 - Fuelwood Stoves

Photos from Bending the Tripod Legs for the Welded Tripod (4W)

Prepare the fifth bend, positioning the longer part so that the curvature touches the right bolt head.

10

The last bend may be performed with the bench vise. The bench vise will also be helpful for correcting the planar form of the tripod leg. Do not use a hammer with the bending device.
11

Prepare the last bend, fixing the end of the workpiece with a distance of 24 mm to the center line of the cap nuts.

Fifth bend with the help of the tube as lever

## Ben 2 and Ben 3 - Fuelwood Stoves

Photos from Bending the Tripod Legs for the Welded Tripod (4W)

## 13

Three tripod legs are welded together; welding seam at the outside.

## 14

The stove shell will be supported by the three horizontal extensions of the tripod.

15

The photo shows the three parts of the Ben stove: Ash pan (1) with grate, tripod (4) and stove shell (3) (with attached stove shield).

Dr.-Ing. Dieter Seifert, Neuoetting
Annex E, page 10

## Ben 2 and Ben 3 - Fuelwood Stoves

## Photos of Alternative to Welded Tripod Legs

Rope clamps may provide a alternative for connection of the tripod legs if welding equipment is not available.

16

Rope clamp M5 x 6 at tripod leg
