

Project: Solar Reflector Cooker LED-PV Lantern Set –2-2015

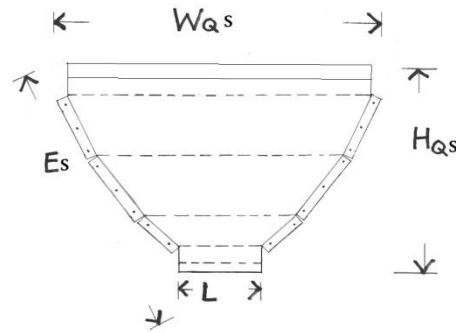

A symmetric square inlet reflector with a smaller square open bottom, assembled with four identical reflector panels has uses that include: c) a stand-alone cooker; d) a reflector wall augmented cooker; e) cooker cart; and h) inverted or wall hung LED reflector.

An asymmetric reflector base cooker holder (f) has four different reflector shape sides, and a symmetric (g) reflector base has four identical reflector shape sides. Both have four bolt-posts to hold the cook pot. The bases may be injection molded bio-plastics with a bottom plug-screw for filling with sand and stones.
