MOTTO: Excellence in Prayer and Hard w

17/10/2016

The President,
Solar Cookers International,
2400 22nd St Ste 210,
Sacramento, California 95818,
USA.

Dear Madam,

INVITATION TO TECHNOLOGY FAIR

The array of technological products in the world today have enabled humanity address various existential issues and improved the way we do things. This is why technology plays a significant role in the development of nations. It is on this note that the above named institution is organizing a technology fair with the theme: '***HARNESSING SOLAR ENERGY TO TACKLE NIGERIA'S ENERGY CHALLENGES: PROSPECTS FOR INVESTMENTS.***' It will hold on Saturday 19th November 2016 by 10:00 am (CAT) at the school premises.

During this event, there shall be exhibition of solar energy devices such as solar box cookers, solar panel cookers, parabolic solar cookers, solar water pasteurizer, and solar fridge built by students in our school. Through this fair, we intend to make Solar cooking popular in Nigeria. Despite being in the tropics and our huge potential for solar cooking; solar cooking is not widely used in Nigeria due to lack of information about this technology.

The rising cost of kerosene which majority of Nigerians use as cooking fuel has made it pertinent to spread the word about solar cooking. This will help many families save fuel costs and channel these savings to other needs.

nave you in our school so we can gain from the expertise of *Solar Cookers International* in solar cooking technology. Find attached, pictures of some of the devices we have built.

While anticipating a favourable response, we say: 'remain blessed.'

Yours sincerely,

Rev. Fr. Godwin Obike, SMMM

(Principal)
