

20191121 **Moons and Planets Like Cold Turkey** Viktoro Medrano

"Like cold Turkey" and "not just Turkey" say the Korean waitresses and cooks at the restaurant Gami Sushi, and as I know Northeast Asians have multivalent symbolisms, they may refer to the moons and planets in outer space. I sometimes think about *JUICE*, the planned *Jupiter Icy Moons Explorer*, of the European Space Agency, ESA. Astronomers know that gigantic Jupiter and Saturn have more than 60 moons each. As I am a *Japanoid*, I am aware of the *wabi-sabi* aesthetic of outer space and the objects therein.

"Like cold Turkey" and "not just Turkey" may refer also to my Esperantic, indigenized spirituality, as I am a Buddhist-Animist. I have physically travelled to many countries in four continents, and I have seen the great variety of religious experiences that others have.
